

ADVANCED DETECTION SYSTEMS

Max III Features & Benefits

FEATURE -Administrative Login Level. Twenty administrator assigned user names, passcodes and login levels. User name, time and date is stamped to each event, (setting change)

BENEFIT – Customer can manage access and document changes made by specific employees. Allows customer to abide by new user identity requirements.

FEATURE - 3 separate reject timings available providing accurate “deploy and actuate” times for different size products.

BENEFIT –Customer can use the specific reject operation setting that best fits the size and spacing of products insuring effective rejection of contaminated product.

FEATURE - Running list of recent detection history visible from menu

BENEFIT – Provides our customer’s supervisory staff with quick visibility of recent metal detector event.

FEATURE - Improved user interface operating menu and larger touch screen.

BENEFIT – The metal detector is easier to use, reducing stress and frustration on the production line

FEATURE -Simplified design, no longer requires an external power supply box.

BENEFIT – Conveyor construction is more economical and reduced surface area requiring sanitation.

FEATURE-Patented technology improves performance when vibration is present.

BENEFIT-Eliminates most false trips caused by vibration so it’s no longer necessary to reduce sensitivity to accommodate vibration.

FEATURE-Adjustable RF protection.

BENEFIT-Improves performance and reliability in facilities with electrical power fluctuations and radiated noise.

FEATURE-Patented coil auto-balance technology.

BENEFIT-Consistent long-term performance and eliminates the need to re-balance the coil.
